

## Submitting Corrected Code

1. Comment out incorrect code and explain why it is incorrect.
  - Do not completely remove incorrect code.
2. Write correct code underneath and explain why it is now correct.
3. You can make changes to your code, even if they are not strictly necessary, IF there is a valid reason.
  - However, these reasons must be fully explained.
  - e.g.
    - This is more efficient and less long winded than my solution because ....
    - I like the style of this change more because ...
4. However, do NOT make unnecessary changes to your code
  - i.e. Do not copy and paste standard solutions and totally replace your code if this is not necessary.
5. You should have executed your corrected code to make sure it now works perfectly, BEFORE submitting corrections.
6. Please add the word “**Corrections**” before your name to the filename (*the same to the class name if sending a Java file*).
