Candidate name

Expansion plans for the future include regional offices in seventeen more countries as many governments worldwide are starting to prioritise environmental issues. The original aim of the company; 'to help in arresting the deforestation of the United Kingdom, by providing indigenous trees at a reasonable cost' has grown into a multi million dollar business across the globe.

current offices in Japan, Thailand, Australia, India and Indonesia. His business plan has led to diversification, and there are current developments in the following areas:

- bonsai trees
- landscaping
- koi carp

Bullets changed to roman numerals 1 mark

The core **business** still remains the same. The company has grown one-year-old seedlings called roottrainers. Costs continue to be kept low (both financially and environmentally) by retaining the sales of bare rooted trees in the second and subsequent years. Here is a brief comparison of the size 1 trees, comparing bare rooted and

supply and demand still exist but to a lesser degree.

Roottrainer Trees nurseries continue to run at full capacity within England, and regional nurseries are now in full swing in America, Thailand and South Africa. The company currently has two nurseries with size 1 trees, comparing bare rooted and

Spelling Corrected 1 mark

Roottrainer Trees has shown major growth over the past twelve months and can now be hailed as a significant success story as it progresses from a small company which started in England, into a global force in arboreal supplies and conservation. Initially starting with offices in America, Thailand, Australia and South Africa, during the first six months of last year new offices opened in Brazil and Japan. The last few weeks have seen the opening of offices in Argentina, India and Indonesia.

has specified has not been available, the company has substituted the next size down and customers have been informed about the reduction in price.

The market for shrubs has also continued to increase and Roottrainer Trees has continued to add an even wider range of shrubs which are entirely suitable for amateur gardeners and in particular the development of wildlife habitats.

The company has been designed to allow current hardware and has been designed to allow on-line requests using the internet. These requests will list all the products and availability within each country, as well as providing the customer with the opportunity to request data on trees which meet their specific needs. For example, if a customer requested trees which were available for an acidic soil and which were between 40 and 89 centimetres in height, the database would suggest which trees or shrubs would be most suitable. It will also provide valuable information about the habit of each specimen, the maximum growing height and spread, growth rates and a multitude of other information.

The advent of the web server for the database has only been a partial success this year.

The other element in last years, corporate development, introduce a secure ordering

to meet the perceived increase in sales that this is likely to cause.

The Information Systems team that manage the website have now finalised the stylesheet used to set the corporate house styles.

This is an excerpt from it:

```
p {color: #00ff00; font-family: arial, helvetica, sans-serif; font-size: 12px}
li {color: #ff0000; font-family: times, "times new roman", serif; font-size: smaller; font-weight: bold}
